

Subject: RM-10209

I would like to encourage passage of this rule making, as I am in favor of the benefits to all concerned.

The benefits first of all would be to the community as this range of frequencies is optimum for emergency communications, especially in the mountainous regions in the west.

Amateur Radio community could benefit because of frequencies that are optimum when others are not. The Amateur Radio state of the art could clearly be enhanced in the context of training and support to the nation and community.

Thank You for considering my comments
